

Spec Sheet

ProTex™

“Sublimation Tissue” For use on Large and Grand Format Rotary Heat Calendars

Intended use of ProTex™

As a continuous thin paper web used to transport cut-work or roll textile through the heat calendar and as a barrier to prevent surplus dye-sub gasses from contaminating the recirculating Nomex belt of the rotary calendar press. Compatible with ALL oil and electric heated rotary drum calendars.

Key Features and Benefits of ProTex™

Lower basis weight: reduces square area cost, reduces transport cost, reduces storage cost, reduces disposal cost

Natural color: No bleaching agents, less harmful to the environment.

Highest gas barrier: Extends the life of the calendar belt by blocking excess dye-gas.

Longer roll length: Fewer roll changes, less downtime.

Formaldehyde free: Eliminates a major cause of heat induced textile yellowing.

High tensile strength: Reduces web tear-outs.

Neutral ph: Retains most tensile strength after prolonged exposure to heat

Recyclable: 100% recyclable ingredients.

ProTex™ is designed to capture all excessive inks transferred through or off the edges of the fabric.
